

Figure 1 is a line graph showing the performance of different models across various parameters. The x-axis represents a parameter from 0.00 to 2.00. The y-axis represents performance, with a dashed line at 0.5. The legend identifies eight series: best v 0 (blue), best prop 0 (orange), best v 1 (green), best prop 1 (red), best v 2 (purple), best prop 2 (brown), best v 3 (pink), and best prop 3 (grey). All series start at approximately 0.1 at x=0.00 and increase as x increases. The 'best v' series generally show higher performance than the 'best prop' series for x > 1.00.
